

ChemManager®

is a web service solution for managing chemical data and staying in compliance with chemical regulation.

ChemManager offers you an 'all-in-one' solution with the necessary tools.

You choose the modules of interest for your business. You can extend your ChemManager with modules for REACH compliance, Risk Assessment, Worker Instruction Sheets, GHS, MSDS and more.

The data modules are kept updated in accordance with current regulation.

Chemical data are only to be registered once!

ChemManager® accepts import of common data formats and allows you to build your database fast and easy. DHI can assist with the implementation and data transfer.

The Basic module allows the complete management of your chemicals in stock and your HSE needs. ChemManager® can interface with your MSDS, ERP and CRM tools.

Training course

As part of the purchase of ChemManager you will be offered a training course tailor-made for your company.

Support

DHI offers technical support, as well as support in connection with data transfer and implementation of ChemManager® at the company site.

ChemManager®

ChemManager - the Easy Way to REACH it

Basic Module

In the basic module of ChemManager chemical data, information on suppliers, users and clients are registered.

Through the basic module there is access to official lists of substances, which are necessary for identifying the constituents of the chemical products, eg the EU list of classified substances (Annex I) and the EINECS list. Other regulatory lists can be purchased on request.

The registered information will be available for surveys on the usage of chemicals in the company facilities and for prioritising the health and environmental actions.

Furthermore, basic data will be available for special modules such as the REACH Tool, ChemAssess, Worker Instruction Sheet systems, Material Safety Data Sheet Systems and Code Number Calculation System.

Special Modules

REACH Compliance Tools

Available March 2007

The REACH Compliance Tools will assist all actors in the supply chain in getting the required overview of how their chemicals will be affected by the different requirements in REACH, and which REACH obligations they have to fulfil.

The tools are: Exposure Scenario tool, Preregistration tool, Communication tool, Role-Duties-Timeline tool and Risk Profile tool.

ChemAssess

Available March 2007

ChemAssess is a tool for assessing and documenting health and environmental effects of chemicals. ChemAssess can be used for prioritising the health and environmental actions within a company.
